Congratulations

Congratulations on the purchase of your Hills Rotary Clothesline, which will bring you many years of trouble free and efficient drying.

It's important that you read this Product Manual thoroughly before installation to benefit from the design features and enjoy safe use of this product.

Thank you for choosing Hills.

Patents and Registered Designs apply to this product.

Warning

• Do not allow children or pets to swing on the clothesline or items of laundry.
• Ensure when raising and lowering your clothesline that bystanders (in particular children) are standing well clear.
• Do not use for any purpose other than to hang and dry washing.
• Do not use your clothesline if parts are worn or damaged.
• Do not allow the frame to lower in an uncontrolled manner as damage or injury may result.

Step 1 – Select a Suitable Location

1.1 Select a suitable area for installation.
1.2 Allow a minimum of 500mm (1'7") clearance around your Rotary Hoist (Fig. 1).

Step 2 – Install the Ground Socket

2.1 Dig a hole 250mm (10") diameter by approximately 650mm (26") deep (Fig. 2).
2.2 Place approximately 200mm (8") of coarse gravel into the hole.
2.3 Insert the main standard into the ground socket. Engage the locking collar and lock into position.

Make sure the tabs are closed to prevent concrete entering the locking recess.
2.4 Place the ground socket and main standard into the hole.
2.5 Support the main standard and concrete into position.

Concrete should be damp enough to ‘hold together’ when squeezed in your hand.
Settle concrete by pushing a thin stick into the mix several times.
Step 3 – Assemble the Hoist

3.1 Place the main standard in the ground socket.

3.2 Place the bottom of the head assembly into the top of the main standard and lower it gently until it stops (Fig. 3).

3.3 To engage, raise the head assembly by approximately 100mm (4") and lower until a ‘click’ is heard.

3.4 Check the head assembly is locked in position by lifting upwards (it should not move). If the head assembly is not engaged, repeat Step 3.3.

Note: There is a small amount of rotational movement between the wind brake and the lower cross latch. This is normal.

Note: Once the head is engaged into the main standard it cannot be removed.

Step 4 – Operating the Hoist

4.1 To adjust the height of your Rotary Hoist, wind the handle and head assembly down and then fit one or more of the plastic spacers in the ground socket. The suggested operating height is the user’s head height +25mm (1") (Fig. 4).

Note: The height adjusting winding mechanism has an automatic device to disengage the handle at the maximum and minimum heights. A slight ‘clicking’ noise will be heard when this system is operating.

4.2 To open: Undo the line tie-off cord. (Refer to Step 6). Make sure the lines are tangle free. Push the lower cross and arms up until the latch engages.

4.3 To fold: Press the latch to release the lower cross. Place your hands on the arms and pull downwards.

4.4 Wrap and fasten the line tie-off cord around the hoist to prevent lines from becoming tangled.

4.5 To remove from the ground socket: Unlock the locking collar by rotating anti-clockwise. Lift the Rotary Hoist from the ground socket and store in a suitable place. Insert the cover into the top of the ground socket.
**Step 5 – Tensioning the Lines**

The lines are pre-tensioned in the factory. No initial tensioning is required.

If over time, the line does need tensioning, the Rotary Hoist **must** be in the open position.

5.1 Insert the Rotary Hoist into the ground socket, open up and lock into position (Fig. 5).

5.2 If the whole clothesline needs to be re-tensioned, start from the outside line and work towards the centre.

If only a single line requires re-tensioning, just re-tension this particular line.

In either case, untie the PVC line from the line tie off saddle on one side of the arm only. Pull PVC line through one clip at a time until line is taut. Re-tie PVC line around tie off saddle. Trim off any excess line if required. Push line into the hole in the arm.

**Do not over tension the lines.**

**Step 5 (continued)**

- **Step 1**
  - Pull line out of arm.

- **Step 2**
  - Remove line from under locking lip.

- **Step 3**
  - Pull line out from tensioner.

- **Step 4**
  - Starting at the furthest arm from the tensioning arm, pull the line tight and move from arm to arm to generate desired line tension.

- **Step 5**
  - Keeping the tension on the line, feed it back through the tensioner. Pull to retain tension.

  **TIP:** Keep pressure on bottom left edge to stop tension loss.

- **Step 6**
  - Swing the line back under the tensioner lip to secure.

- **Step 7**
  - Feed line back into arm through central hole. Cut off excessive line if required prior to putting into arm.

- **Step 8**
  - Push line firmly into arm to give a flush result.
Step 6 – Line Tie-Off Cord

**IMPORTANT:** The extended length of clothesline fitted with a plastic toggle is called the line tie-off cord, and is designed to keep lines neatly together when the Rotary Hoist is not in use.

6.1 Never leave the line tie-off cord in an unsecured position (Fig. 6a).

6.2 When the Rotary Hoist is not in use, fold the arms against the Main Standard and wrap the line tie-off cord around all of the arms, securing the clothesline. You may have to wrap the line tie-off cord around the arms twice (Fig. 6b).

6.3 When the Rotary Hoist is in use, securely fasten the line tie-off cord out of the way by stretching it between two arms and attaching the hook at the furthest most point from the origin (Fig. 6c).

---

**Hills Handy Hints**

One of the benefits of a Rotary Hoist is that it spins naturally in the breeze, allowing the sun to shine on all your clothes and speed up drying time.

Raise your hoist for maximum drying efficiency and to ensure clearance for longer items.

The wind brake assists in the pegging and unpegging of clothes on windy days by restricting the free rotation of the clothesline. It can be engaged by winding the ‘head’ of the hoist fully down.

Place smaller items of clothing on the lines nearest the centre and work your way outwards for larger items.

When hanging thick or bulky items, you may hang the item over more than one line.

When you do not expect to fill the capacity of your hoist, hang your clothes on the outer lines, this will allow your clothesline to spin more easily.

---

**Care and Maintenance**

It is a good idea to occasionally inspect all components and check for wear and tear or damage. If there is any damage, parts should be replaced with original Hills spares or the Hoist repaired before using again.

The hoist should be periodically wiped clean with a damp cloth and mild detergent.

Your Rotary Hoist can be easily folded and removed from the ground socket to give you extra garden space.

The hoist should be easy to remove from the ground, but if left for a period of many years it may become more difficult. It is recommended the hoist is lifted out of the ground at least every six months.
Hills Warranty

1. Hills provides consumers with the following warranty in relation to this Product, in addition to complying with the requirements of any relevant legislation, including the Competition and Consumer Act 2010 (Cth) in Australia and the Consumer Guarantees Act 1993 in New Zealand (the Acts), except where a New Zealand consumer acquires the relevant Product for the purposes of a business.

2. In this warranty, we have used the following definitions:

(a) Hills, our or we means Hills Limited (ABN 35 007 573 417) of 159 Port Road Hindmarsh South Australia 5007;

(b) Products means the following goods manufactured by Hills (including products manufactured for Hills by its contract manufacturers):

Hills Rotary Clothesline;

(c) Material means a material or component used by Hills in the manufacture of the Products;

(d) Warranty Period means 10 years from the date of purchase of the relevant Product and, in relation to polycore line, means a period of 1 year from the date of purchase of the Product. If the Product or part (as the case may be) is repaired or replaced, there will be no extension to the original warranty period; and

(e) Workmanship means the handling, assembly and manufacturing processes performed by or on behalf of Hills in order to manufacture the Products.

3. Hills warrants that for the duration of the Warranty Period, all Products will be free of faults arising from defects in Workmanship or Materials, on the terms and conditions set out in this warranty.

4. Hills undertakes that if during the Warranty Period any Product, or any part of a Product, has failed to operate correctly due to faulty Workmanship or defective Material, it will repair or replace the Product or part (as the case may be) free of charge provided that the following procedure is met:

(a) The consumer must contact Hills upon becoming aware of any defect to a Product. The contact details for Hills are set out in this warranty and under the heading “Hills Contacts”.

(b) Following consultation with Hills, Hills will determine whether there is a defect, and if so Hills agrees to (at Hills’ option):

(i) in the case of goods – repair, replace or supply equivalent goods, or pay the cost of any of those remedies to the consumer; or

(ii) in the case of services – supply the services again or pay the cost of having the services supplied again.

(c) If Hills requests the return of the applicable Product or part, Hills will be responsible for the collection and freight costs of returning that Product or part. The consumer agrees to assist Hills with any reasonable request to enable Hills to collect such Product or part.

(d) Hills also agrees to be responsible for the freight costs to deliver any new Product or replacement part to the consumer.

5. This warranty is in addition to any non-excludable legal rights or remedies conferred on the consumer under any applicable Act and any similar laws. To the extent permitted by law, Hills’ liability for any non-excludable condition or warranty is limited to rectifying any defect at its option, as set out in paragraph 4(b).

6. Subject to the requirements of any applicable Act or legislation and to the extent permitted by law, no liability (whether expressed or implied) of any nature whatsoever, is accepted by Hills for any consequential loss, damage or injury arising as a result of any fault in the Products.

7. This warranty does not extend to damage to Products which occurs during transit or transportation, or which is caused by any abuse, accident or improper installation, connection, use, adjustment or repair or use of goods otherwise than in accordance with instructions issued by Hills.

8. The warranty on Products is waived if any addition or attachment to the Products do not have Hills’ specific approval or are not sold as Hills products. The Products are designed to perform specific tasks under established test loads and unauthorised attachments may produce stresses for which the design is not appropriate.

9. The following applies to consumers who purchased a relevant Product in Australia:

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law. You are entitled to a replacement or refund for a major failure and compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.
